List of Specimens taken to be Suitable for Live Import

Environment Protection and Biodiversity Conservation Act 1999

This is a list of specimens suitable for live import. The list is divided into two parts:

Part 1 is a list of live specimens that do not require an import permit under this Act; and

Part 2 is a list of live specimens that require an import permit under this Act.

Definitions as defined under Part 23 of the *Environment Protection and Biodiversity Conservation Act 1999*.

animal means any member, alive or dead, of the animal kingdom (other than a human being).

live animal includes animal reproductive material.

plant means a member, alive or dead, of the plant kingdom or of the fungus kingdom, and includes a part of a plant and plant reproductive material.

live plant includes plant reproductive material.

Part 1 – Live specimens not requiring an import permit

This list includes species of animals and plants suitable for live import without an import permit issued under this Act.

This list also contains species that were approved for release prior to 1 May 1984, under the *Quarantine Act 1908* for the purpose of biological control. The species that have been included are based on current accessible records.

This list is also taken to include any live plant the introduction of which into Australia is in accordance with the *Quarantine Act 1908*, provided the plant is not included in the list of CITES specimens under this Act.

The import of live animals included in this list are largely unrestricted, however, some freshwater fish can only be imported if specific restrictions are met (eg: Only male *Myleus rubripinnis* of length 8cm and over). Restrictions are listed as part of the 'Taxon' column.

The 'Taxon' column of the list includes the scientific name of the listed taxa.

The 'Common Name' column of the list is included for information only and the scientific name determines if a species is included on the list.

The list is organised as follows:
